A Computer Engineering Graduate (2025) learning backend development with the MERN stack through hands-on projects.
Gained practical exposure to REST APIs, authentication, and database-driven applications through project-based learning.
Familiar with the complete development lifecycle from planning and documentation to development.

Experience

◆ **MERN-Stack Training (Project-Based)**

Royal Technosoft | Jan 2025 – Apr 2025

- Learned and applied MERN stack fundamentals through guided, project-based training.
- Understood the complete project development lifecycle including idea discussion, documentation, schema design, and implementation.
- Worked on NEXORA, a deal discovery platform, extending the base idea with additional features and real-world use cases.
- Focused primarily on backend development using Node.js, Express.js, and MongoDB. Designed REST APIs, authentication flows, and database schemas.

Technical Skills

Languages: JavaScript, HTML5, CSS3
Frontend: React.js, Bootstrap, TailwindCSS
Backend: Node.js, Express.js
Database: MongoDB
Version Control: Git, GitHub
Other Tools: Postman
Familiar With: REST APIs, MVC architecture, JWT authentication, Google OAuth, Maps JavaScript API

Projects

◆ **NEXORA – Full-Stack Deal Sharing Web App (MERN)**

Final Year Project | 2025

- Developed a complete MERN-stack application enabling users to discover, post, and manage local deals.
- Designed separate dashboards for Users, Businesses, and Admins with secure login via JWT and Google OAuth.
- Integrated Cloudinary for image uploads and email notifications for reminders and password reset.
- Key features: Business registration and approval system, Token-based logout, Admin analytics, and search filtering, Responsive UI.

Tech & Tools: React, Bootstrap, Node.js, Express, MongoDB, JWT, Cloudinary, Postman
